## What Is Cloud Migration CMG?

Cloud Migration (CMG) is a tool that helps customers migrate systems from the source platform to Tencent Cloud. It provides source-end resource research, cloud migration planning, target resource creation, and batch migration implementation for migration projects. It aims to offer business-provided all-in-one Cloud Migration Service to simplify and accelerate the cloud migration process.

## Why Should You Use Cloud Migration?

If a large number of migration tasks run simultaneously, dispersed tasks make tracking migration progress extremely difficult. Cloud Migration integrates multiple migration tools, allowing users to easily monitor and manage large-scale system migration.

## Which Migration Tools Are Integrated in Cloud Migration?

Cloud Migration integrates tools such as the cloud host migration service go2tencent, database migration Service DTS, COS migration, and Elasticsearch Service migration to help users initiate batch data migration tasks. More migration tools like Kafka will be supported in the future.

## How Is Cloud Migration Charged?

Cloud Migration requires no additional charge. You just need to pay for the migration tools used and the cloud resources created.
