Notes

- The Razor Speed Bundle includes the public network peak bandwidth. The public network peak bandwidth is only the upper limit of bandwidth, not taken as a committed metric for the business. When there is preemption of bandwidth resources during peak business periods, the peak bandwidth may be affected. The Razor Speed Bundle is not suitable for the scenarios with strong needs for ensuring public network bandwidth stability.
- The Razor Speed Bundle offers unlimited traffic, and no additional fees will be incurred for public network outbound and inbound traffic.
- The default quota for creating instances using the Razor Speed Bundle is 5 instances in a single region.
- When upgrading the Razor Speed Bundle for an instance, you can only select another Razor Speed Bundle with higher specifications.
- This document only provides the relevant information about the Razor Speed Bundle. For more billing information about Lighthouse, see [billing overview](#).
