CloudApp

CloudApp is a platform for managing the full lifecycle of cloud applications. It helps customers to use their Tencent public cloud accounts to quickly procure, automatically deploy, and easily manage software and underlying Tencent Cloud resources required for the applications. CloudApp has four advantages: transparent software and hardware procurement, automated deployment and installation, private running environments, and user-friendly Ops management, improving the cloud application management efficiency of customers and meeting their requirements for data security and privacy.

Cloud Resource

Tencent Cloud resource required for running application instances, such as TKE container clusters.

Service Provider

A service provider is a development team providing software deployable through CloudApp.

Application Instance

In CloudApp, an application instance means an application that runs in the customer's own public cloud account after software is installed through CloudApp. The application instance includes two parts: software and cloud resources.
